Experience

Eaze, San Francisco, California

September 2021 - December 2025

Senior Software Engineer II

- Contributed to the eaze-core initiative. An initiative to improve testing across various development projects. Built using Javascript and Jest.
- Co-created City Landing Pages, a project with the goal to increase visitor count and improve purchase conversion rates on the consumer website. Built with React and Typescript.
- Developed Brand Pages shopping experience, allowing consumers to shop for products based on different cannabis brands. Built with React, Typescript, and C#.
- Integrated Zendesk customer support widget on consumer website (including authentication), allowing for seamless and effective customer support requests resolution. Built with React and Typescript.
- Integrated Persona ID verification service in various flows throughout the consumer website, allowing Eaze to maintain proper compliance. Built with React and Typescript.
- Contributed to various backend NodeJs micro-services to enable miscellaneous frontend features and bug fixes.

Capital One, San Francisco, California

December 2018 - September 2021

Senior Software Engineer

- Co-created Search 2.0, a PoC for transaction search that enabled more accurate search results for users. Built with AngularJS, Python, and Elasticsearch.
- Co-created Monitoring Dashboard, a PoC for displaying data from multiple datasources. Enabled faster analysis of website metrics, built with React.
- Contributed to an internal React component library to support LOB requests, allowing for component reuse throughout various Capital One webpages.
- Owned search functionality and backlog, and contributed various changes and improvements such as ADA compliance and inclusion of more feature links.
- Developed Product Ratings & Reviews, an API used by internal clients to fetch data from Bazaarvoice, allowing teams to display review information for various Capital One products. Built with Typescript and NestJS.

HumanGeo, Arlington, Virginia

June 2016 – November 2018

Software Engineer

- Participated in initial development and design of government tracking website using React/Redux.
- Provided maintenance and enhancements to existing presentation/visualization website using Angular/TypeScript.
- Researched and implemented new library for PDF generation that let customers have tangible copies of briefings from the web app.
- Developed web scraping scripts using Python to support internal team efforts.
- Assisted with code peer reviews and QA testing across multiple teams and projects.

Northrup Grumman Corporation, McLean, Virginia

January 2015 – June 2016

Software Engineer

- Worked on Computer Aided Dispatch System using C# and .Net framework.
- Provided general maintenance to various window forms legacy systems.
- Collaborated with customers in refining product requirements to deliver desired functionality.
- Assisted in product quality testing across various C# projects.
